	Title	Abstract
1	Testing subsystems on platforms for software applications	
2	System for and method of emulating a database system	
3	Method and system for providing internet-based database interoperability using a frame model for universal database	
4	Database clean-up system	
5	Interactive automated mapping system	
6	High-level, task-oriented application programming interface usage method for accessing legacy system, involves emulating database management access protocol for running task server on high-level application programming interface	
7	Database emulating system emulates standard database by accessing resident data stored in data storage device through host software application, and translating data into standard protocol format
